

## Recombinant Murine Stromal-Cell Derived Factor-1 alpha/CXCL12α (rMuSDF-1α/CXCL12α)

**PrimeGene Technical Data Sheet** 

Catalog Number: 221-12A

**Source:** Escherichia coli.

**Molecular Weight:** Approximately 8.0 kDa, a single non-glycosylated polypeptide chain containing 68 amino acids.

**Quantity:**  $2\mu g/10\mu g/1000\mu g$ 

AA Sequence: KPVSLSYRCP CRFFESHIAR ANVKHLKILN TPNCALQIVA RLKNNNRQVC IDPKLKWIQE

YLEKALNK

**Purity:** > 97 % by SDS-PAGE and HPLC analyses.

Biological Activity: Fully biologically active when compared to standard. The biological activity determined by a

chemotaxis bioassay using human peripheral blood monocytes is in a concentration range of 50-100

ng/ml.

**Physical Appearance:** Sterile Filtered White lyophilized (freeze-dried) powder.

Formulation: Lyophilized from a 0.2 μm filtered concentrated solution in PBS, pH 7.4. Endotoxin: Less than 1 EU/μg of rMuSDF-1α/CXCL12α as determined by LAL method.

**Reconstitution:** We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the

bottom. Reconstitute in sterile distilled water or aqueous buffer containing 0.1 % BSA to a concentration of 0.1-1.0 mg/mL. Stock solutions should be apportioned into working aliquots and

stored at  $\leq$  -20 °C. Further dilutions should be made in appropriate buffered solutions.

**Shipping:** The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature

recommended below.

Stability & Storage: Use a manual defrost freezer and avoid repeated freeze-thaw cycles.

■ 12 months from date of receipt, -20 to -70 °C as supplied.

• 1 month, 2 to 8 °C under sterile conditions after reconstitution.

• 3 months, -20 to -70 °C under sterile conditions after reconstitution.

Usage: This material is offered by Shanghai PrimeGene Bio-Tech for research, laboratory or further

evaluation purposes. NOT FOR HUMAN USE.

## Murine Stromal-Cell Derived Factor-1 alpha/CXCL12a

CXCL12 also known as SDF-1 is belonging to the CXC chemokine family. Murine CXCL12 is expressed as two isoforms that differ only in the C-terminal tail. Both SDF-1 isoforms undergo proteolytic processing of the first two N-terminal amino acids. Contrast to SDF-1 $\beta$ , SDF-1 $\alpha$  is shorter by four amino acids at the C-terminal tail. On the cell surface, the receptor for this chemokine is CXCR4 and syndecan4. CXCL12 is strongly chemotactic for T-lymphocytes, monocytes, but not neutrophils. SDF-1 is highly conserved between species, murine CXCL12 $\alpha$  shares approximately 93 % amino acid sequence identity with human CXCL12 $\alpha$ .
