## **PrimeGene** a biotechne brand

## Recombinant Human Apolipoprotein A-I (rHuApoA-I)

## **PrimeGene Technical DataSheet**

Catalog Number:	602-19
Source:	Escherichia coli
Molecular Weight:	Approximately 28.1 kDa, a single non-glycosylated polypeptide chain containing 243 amino acids.
Size:	100µg/ 500µg/ 1mg
AA Sequence:	DEPPQSPWDR VKDLATVYVD VLKDSGRDYV SQFEGSALGK QLNLKLLDNW
	DSVTSTFSKL REQLGPVTQE FWDNLEKETE GLRQEMSKDL EEVKAKVQPY
	LDDFQKKWQE EMELYRQKVE PLRAELQEGA RQKLHELQEK LSPLGEEMRD
	RARAHVDALR THLAPYSDEL RQRLAARLEA LKENGGARLA EYHAKATEHL
	STLSEKAKPA LEDLRQGLLP VLESFKVSFL SALEEYTKKL NTQ
Purity:	> 98 % by SDS-PAGE and HPLC analyses.
<b>Biological Activity:</b>	Bioassay data are not available.
Physical Appearance:	Sterile Filtered White lyophilized (freeze-dried) powder.
Formulation:	Lyophilized from a 0.2 µm filtered concentrated solution in PBS, pH 7.4.
Endotoxin:	Less than 0.1 EU/µg of rHuApoA-I as determined by LAL method.
<b>Reconstitution:</b>	We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the
	bottom. Reconstitute in sterile distilled water or aqueous buffer containing 0.1 % BSA to a
	concentration of 0.1-1.0 mg/mL. Stock solutions should be apportioned into working aliquots and
	stored at $\leq$ -20 °C. Further dilutions should be made in appropriate buffered solutions.
Shipping:	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature
	recommended below.
Stability & Storage:	Use a manual defrost freezer and avoid repeated freeze-thaw cycles.
	• 12 months from date of receipt, -20 to -70 °C as supplied.
	• 1 month, 2 to 8 °C under sterile conditions after reconstitution.
	• 3 months, -20 to -70 °C under sterile conditions after reconstitution.
Usage:	This material is offered by Shanghai PrimeGene Bio-Tech for research, laboratory or further
	evaluation purposes. NOT FOR HUMAN USE.

## Human Apolipoprotein A-I

Apolipoprotein A-I encoded by the APOA1 gene is the major protein component of high density lipoprotein (HDL) in plasma. It has a specific role in lipid metabolism. Apolipoprotein A-I participates in the reverse transport of cholesterol from tissues to the liver for excretion by promoting cholesterol efflux from tissues and by acting as a cofactor for the lecithin cholesterol acyltransferase (LCAT). Apolipoprotein A-I is also isolated as a prostacyclin (PGI2) stabilizing factor and thus may have an anticlotting effect. Apolipoprotein A-I has been shown to interact with ABCA1, GPLD1 and PLTP. Apolipoprotein A-I binds to lipopolysaccharide or endotoxin and has a major role in the anti-endotoxin function of HDL. Mature human ApoA-1 shares 65 % and 62 % a.a. sequence identity with murine and rat ApoA-1, respectively. It has an approximate molecular weight of 28.1 kDa.
